

MoceanAPI Broadcast Add-On

MoceanAPI Broadcast module allows sending of text messages in bulk to frontend users by using MoceanAPI service.

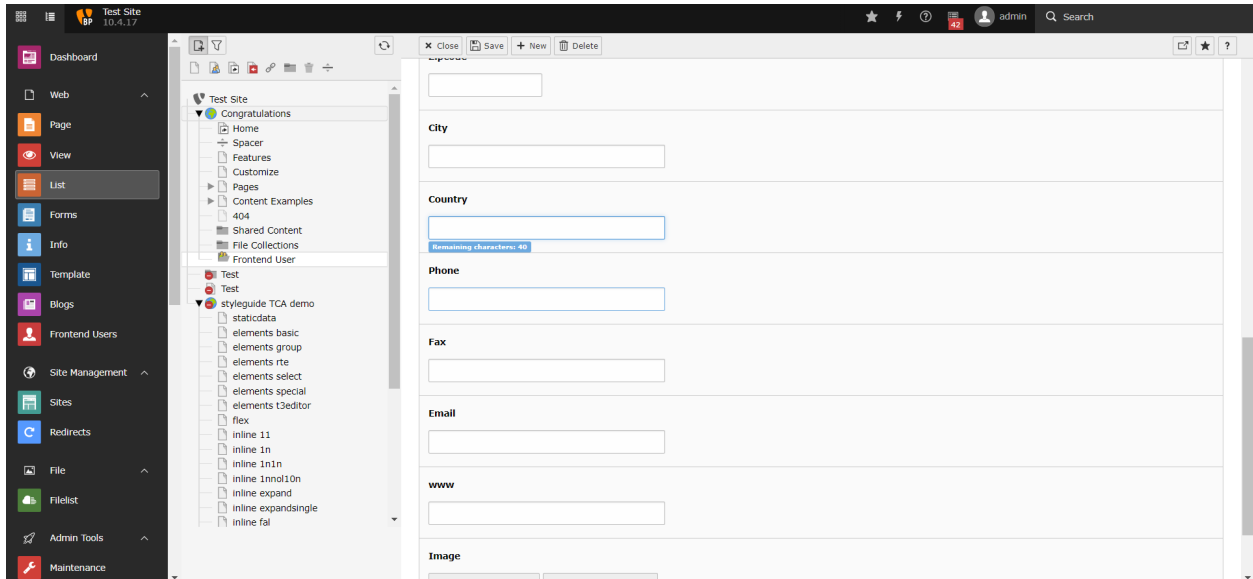

Configuration

In the Extension Configuration page, users can configure their API Key, API Secret, Sender and Country Code. To find API Key and API Secret, go to <https://dashboard.moceanapi.com/>. For new users, register at https://dashboard.moceanapi.com/register?fr=typo3_broadcast.

If correct credentials are given, your credit balance will appear at the SMS Broadcast page.

Users can select a default country to check for country code and format of phone numbers. However, if the selected recipient has inputted a valid country in their Personal Data, checking the number with their country is in first priority. If the country inputted is invalid, the number will only then be checked with the default country.

If the number is considered invalid format for the default country, the SMS attempt is considered failed. If no default country is selected, only checking for recipients with valid country in Personal Data is done.

Sending SMS

Users can send SMS to:

- All users
- Specific user groups
- Specific users
- Specific phone numbers

To send SMS to specific phone numbers, users are required to enter the phone numbers with space as delimiter (e.g. 60123456789 60123456666), country code is required :

SMS Broadcast

Credit Balance: EUR 7,5348
